# Safety Precaution

## WARNING

Service should not be attempted by anyone unfamiliar with the necessary precautions on this player. The following precautions are necessary during servicing.

- 1. Many electrical and mechanical parts in this player have special characteristics often pass unnoticed and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this manual and its supplements: electrical components having such features are identified by a  $\Delta$  in the schematic diagram and the parts list. Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.
- 2. Before returning the set to the customer, always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as

terminals, screwheads, metal overlays, etc. to be sure the set is safe to operate without danger of electrical shock. Plug the AC line cord directly into a 120V AC outlet (120V Version only). (Do not use a line isolation transformer during this check.) Use an AC voltmeter having 5000  $\Omega$  per volt or more sensitivity in the following manner: Connect a 1500  $\Omega$  10 watt resistor paralleled by a 0.15 $\mu$ F, 150V AC capacitor, between a known good earth ground (water pipe, conduct, etc.) and the exposed metallic parts, one at a time. Measure the AC voltage across the combination of 1500  $\Omega$  resistor and 0.15 $\mu$ F capacitor. Reverse the AC plug at the AC outlet and repeat AC voltage measurements for each exposed metallic part. Voltage measured must not exceed 0.3 volts RMS. This corresponds to 0.2mA AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

# Specifications (DD-1010C only)

Type	Soft touch front loading stereo double cassette deck with Dolby NR system.
Track system	4 track, 2 channel stereo playback (Deck A) and Recording/Playback (Deck B)
Recording system	AC bias system (bias frequency: 105 kHz)
Erasing system	AC system
Tape speed	1-7/8 ips (4.76cm/sec.)
Heads	Hard permalloy recording/playback head $\times$ 1 Hard permalloy playback head $\times$ 1 Double gap erasing head $\times$ 1
Motor	Electronic governor controlled DC motor
Wow and flutter	Less than 0.15% (VRMS), 0.30% (DIN)
Fast winding time	Approximately 120 seconds with C-60 cassette tape

# Alignent Procedures

## 1. Before Measurements and Adjustment

The following general conditions apply to the electrical measurements and adjustments unless especially stated otherwise.

- Dolby NR switch off.
- Volume control: Recording level VR901 max.
- Use 500mV (200nwb/m) for 0 dB as the standard level of the unit.
- Test tape
  - TCC-154 \_\_\_\_\_ Azimuth(12.5kHz, -20dB)
  - TCC-122 \_\_\_\_\_ Tape speed(3kHz, -10dB)
  - TCC-130 \_\_\_\_\_ Playback level (Dolby NR ref. tape 400Hz, 0dB)
  - TCC-184 \_\_\_\_\_ Playback frequency response
- Reference Tape
  - Normal \_\_\_\_\_ TDK AD-60
  - CrO<sub>2</sub> \_\_\_\_\_ TDK SA-60
  - Metal \_\_\_\_\_ TDK MA-X60

## 2. Instrument required

- Audio frequency oscillator
- ACVM or dual channel, mV-meter
- Wow/Flutter meter
- Oscilloscope

## Note:

- <sup>\*a</sup>. Prior to any measurement or adjustment with the tape running, heads and tape guides should be degaussed and cleand. Reference below the figure.
- <sup>\*b</sup>. The maximum permissible speed variation ± 0.5%. Moreover the Wow and Flutter can be read. This value should not be exceed 0.2%.
- <sup>\*c</sup>. When the channel is adjusted, this may slightly affect the adjustment of the other channel.If the adjustment is correct, the frequency response curve will be similar to curve b in figure 1, distortion below 3%.
